

Electromagnets

We make an electromagnet and discover that a current flowing down a wire can act just like a magnet.

This Electromagnets workshop is a natural follow on from Massive Magnets workshop. It also works well as a stand alone workshop too.

We use our earlier learning and apply it – everyone makes their own electromagnet. With further learning we work out how to make improvements.

Every student takes home their electromagnet – together with lots of follow up suggestions for parents to do at home with their junior scientist.

This workshop covers a number of topics on the Primary Science National Curriculum

WORKSHOP DURATION

1hr

YEAR(S)

KS2

MAX GROUP SIZE
