

Reduce / Re-Use / Recycle

We look at the different types of materials we find in our homes. How can we reduce our consumption, reuse and correctly recycle items?

What is the practical meaning behind Reduce / Re-Use / Recycle? How can we as individuals reduce how much we use? Lets look at different forms of transport. We examine the journey of different every day items such as bottled water. Recycling is a complicated process. Children investigate how to check their used items so that they dispose of them correctly. Each child will learn how to sow a single seed and look after their plant as it grows too.
