

Will it Float?

Why do some things float? Help your children understand the science of buoyancy and related topics – with simple fun investigations. This workshop has been recently rewritten and is even more fun.

KS1-2 Experiments in Water and Forces takes children's natural love of water experiments to a whole new level.

Children learn about the properties of every day items. What does and does not float? How do up thrust, buoyancy, and forces help?

Hands on science experiments with water are a winning combination in the class room.
