
Black Holes

KS2 children get to grips with the concepts behind Black Holes in this innovative workshop. They also build a black hole model to take home..

WORKSHOP DURATION

1hr

YEAR(S)

KS2

MAX GROUP SIZE

30

Black Holes takes a difficult concept and makes it simple to understand. We do this using the right words and practical investigations. Children learn how we discovered and proved the existence of black holes. Together we explore how black holes form. We investigate the role of black holes in the universe.

This is fun, practical science at its best – prompting investigation and correct use of scientific language.

We guarantee that the black holes your children make are for demonstration only. So its perfectly safe to try one at home.
