
Water Cycle

The Water Cycle is a safe practical Chemistry experiment for KS2. Your children experiment by removing the salt in water, using the water cycle.

The Water Cycle is a very popular workshop. Teachers book it to support the properties and changes of materials topic.
Children love these experiments. They look at the changes of states from liquid to gas, and back again. Every child records and interprets their results. We look at the difference between specific heat and latent heat. We also explore energy transfer.
