
Firework Science

Investigate the science behind fireworks. Practical safe investigations using bunsen burners and flame colours, Safe, fun and some great wow moments.

Firework science and astronomy come together in this exciting workshop. It is unforgettable and packed full of practical science.

We take a simple look at the periodic table. Then we get stuck into practical investigations. You will delight in your childrens reactions as they discover which materials make which flame colours.

We bring everything we need for the experiments. Its safe, fun and completely wow. It can also provide a great wall display of the work the children can do in the workshop, or as a follow up.

Some teachers also use this workshop with the Firework Makers Daughter book.
