
CSI – Who Dunnit?

Children use chromatography and CSI fingerprinting skills in a new investigation to discover who dunnit..

CSI: Who Dunnit? keeps your junior detectives busy, puzzled and engaged.

Pupils learn new CSI skills, chromatography and fingerprinting. They then use their new detective skills to then find out “who dunnit”!

The crime is heinous – someone tampered with the teacher’s sugar bowl for her tea. She discovered the crime just before her break…

Who did it – who was the culprit?

Children will have a case file, just like a detective. They have to work in teams to investigate a range of evidence and solve the crime. We find the keenest Hands on Scientists then take their CSI skills home and play detective with parents or carers and siblings…
