
Lovely Light

Explore the "colour of light" through a number of brilliant hands on experiments.

We investigate light absorption and lasers, using a range of specialist equipment. We also introduce the fact that light is made of 7 colours! Through a brilliant range of hands on investigations, children discover the colours they see are those that are not being absorbed by the object light is being shone upon. Each child gets to make their very own colour spinner to take home, a great extension activity to follow on the learning from their workshop. A perfect choice for KS1 and KS2 light topic learning, expertly adapted to suit age and ability.
